Line Departments	Solar	

Layers required to be used	Query build
Hospital; Community_Health_centre; Primary_Health_centre; Dispensary; National_Highway; State_Highway; Other_Roads	citizen location as input; find the nearest facility by distance (buffer) and show route by combining all type of road layers
Blood_Bank; Hospital; Block_boundary; National_Highway; State_Highway; Other_Roads	Select all hospitals and blood banks within 10 km (buffer) of user location and rank by shortest access
Hospital; Community_Health_centre; Primary_Health_centre; Dispensary; Flood_hazard; Earthquake; Wind_Hazard	Filter facilities that are outside hazard polygons or facilities intersecting hazard zones
Well; Tubewell; Spring; Waterbody; Block_boundary	Find all water sources within 2 km of user location
GroundWater_Potential; Well; Tubewell; Block_boundary	Overlay user location with groundwater potential polygon and list nearby wells/tubewells
Places_of_Tourist_Interest; Temple; Mosque; Church; Circuit_house;	Find all tourism and religious places within 10/15 km of user location
Places_of_Tourist_Interest; Circuit_house; National_Highway; State_Highway	Select tourist places near major roads and with accommodation within threshold distance (5/10 km)
Places_of_Tourist_Interest; Temple; Mosque; Church; Flood_hazard; Earthquake; National_Highway	Show tourist places outside hazard zones and near accessible roads
School; Block_boundary	Find all schools within 3 km of user location where School_with_accessibility = Yes
School; Collage; University; Flood_hazard; National_Highway; State_Highway; Other_Roads	Show education facilities outside hazard zones and near road network
School; Collage; University; PostOffice; PoliceStation; Hospital; Community_Health_centre	Find nearest education facility and nearby support services
School; Hospital; PoliceStation; PostOffice; Headquarters; National_Highway; State_Highway	Find public facilities with good road access and low hazard exposure for solar readiness
Block_boundary; Hospital; Community_Health_centre; Primary_Health_centre; Dispensary; Rural_population; Urban_population	Measure block areas or population polygons beyond service distance from health facilities using buffer of 5/10 km
Hospital; Community_Health_centre; Primary_Health_centre; Dispensary; Flood_hazard; Earthquake	Identify all health facilities intersecting hazard polygons
Block_boundary; Rural_population; Urban_population; Well; Tubewell; Spring; Waterbody	Identify populated areas with low proximity to water sources
Well; Tubewell; Spring; Waterbody; Flood_hazard	Detect water points inside or near flood hazard zones

Places_of_Tourist_Interest; Temple; Mosque; Church; PoliceStation; PostOffice; Hospital; Circuit_house; Inspection_Bungalow	Find tourism sites lacking nearby public amenities and visitor support services
Places_of_Tourist_Interest; Temple; Mosque; Church; Flood_hazard; Earthquake	Identify tourism and religious sites exposed to hazards
Places_of_Tourist_Interest; National_Highway; State_Highway; Railway_station; Railway_line	Rank tourism sites beyond desired road/rail access distance
School; Collage; University; Flood_hazard; Earthquake; National_Highway; State_Highway; Other_Roads	Detect institutions in hazard zones or poorly connected by roads
Block_boundary; Rural_population; Urban_population; School; Collage; University	Compare population distribution with institution density by block
School; Hospital; Community_Health_centre; Primary_Health_centre; PoliceStation; PostOffice; Headquarters; Flood_hazard	Select public institutions outside hazard zones for solar pilot deployment
Slope; Relief; Landuse_NALANDA_NRSC; Flood_hazard; National_Highway; State_Highway; Waterbody	Find flat/moderate slope land parcels with compatible land use, road access, and low hazard conflict
Hospital; Community_Health_centre; Primary_Health_centre; Dispensary; Rural_population; Urban_population; Block_boundary	Locate block wise population clusters lacking health facilities for proposing new facility. Number of health facility intersecting population poluygon
Hospital; Community_Health_centre; Primary_Health_centre; Dispensary; Flood_hazard; Earthquake; National_Highway; State_Highway; Other_Roads	Identify facilities intersecting hazard polygons with maximum route network
Blood_Bank; Hospital; National_Highway; State_Highway; Other_Roads	Measure access between blood banks and hospitals to flag logistics bottlenecks
GroundWater_Potential; Well; Tubewell; Rural_population; Urban_population; Block_boundary	Identify areas with no or very few existing tubewell/ well available. Suggest new source locations where groundwater potential is favorable and existing source access is low
Water_Table_Contour; Well; Tubewell; Rural_population; Urban_population	Identify areas where groundwater conditions and population dependence suggest stress or monitoring need
Temple; Mosque; Church; Places_of_Tourist_Interest; National_Highway; State_Highway; Railway_station	Cluster cultural/religious sites that can be linked into circuits with minimal travel gaps

Places_of_Tourist_Interest; Temple; Mosque; Church; Flood_hazard; Earthquake; Relief; Slope	Flag sites needing hazard advisories, route caution, or seasonal management
School; Rural_population; Urban_population; Block_boundary	Locate high-demand settlements for new or upgrading schools
School; Flood_hazard; Earthquake; National_Highway; State_Highway; Other_Roads	Identify schools needing retrofitting, relocation support, or emergency planning
School; Hospital; Community_Health_centre; Primary_Health_centre; PoliceStation; PostOffice; Headquarters; Flood_hazard; National_Highway; State_Highway	Shortlist institutions for rooftop solar using service importance, access, and hazard safety
School; Hospital; Well; Tubewell; Places_of_Tourist_Interest; Slope; Flood_hazard; Block_boundary	Locate areas where solar can support education, health, water pumping, and tourism services together using filter by layers

Additional: facility types, public/private, 24x7 availability
Additional: blood group availability, emergency services
Add attribute field Hazard-safe is Yes/No
Additional: source status, drinking/non-drinking, seasonal/perennial
Additional: Potential class = High/Medium/Low
Optional: category, visiting hours, ticketing
Road proximity <= 5/10 km; Additional: accommodation available = Yes
Additional: Hazard-safe = Yes
Additional: School_with_accessibility = Yes
Additional: Hazard-safe = Yes
Optional: school type, level, girls/boys/co-ed
Road distance <= 5 km; outside hazard zones
Add attribute field Facility_in_hazard is Yes
Additional: Service threshold distance; minimum source count
Additional: Within/Intersect flood zone

Additional: Amenities layer
Additional: Site_in_hazard = Yes
Additional: Access threshold exceeded = Yes
Hazard exposure or road distance > threshold
Priority score based on population-to-institution ratio
Additional: Institution type + hazard-safe = Yes
Slope suitable; land use eligible; outside flood zone
Additional: Hazard exposure is Yes; alternate route poor
Travel time or the total distance > threshold
Additional: Potential high
Additional: high source dependence
Additional: Cluster distance and route continuity criteria

Additional: Hazard/terrain risk threshold exceeded
Population-served threshold + current distance to school
Additional: Hazard exposure = Yes; poor access = Yes
Additional: Institution priority + outside hazard zone
Multi-sector proximity + suitability score
